OdinDoc Imaging provides the technology to capture store and effectively retrieve virtually any documents, legal, letter, and small size documents such as checks and signature cards. Reduce your dependency for paper documents with **OdinDoc...**

Use OdinDoc to define and store a virtually unlimited number of document types, each with its own unique set of database indexing and key fields for easy retrieval. OdinDoc provides up to four user definable indexing fields per document type and includes four system index fields for indexing purposes, such as document type, user id, batch, and scan date.

Functional Features:

- ▶ **Define Documents** - Multiple document types supported. Setup new documents for scanning and filing in seconds -- Loans, Mortgages, IRA Accounts, SBLLI, Other file folder applications.
- ▶ **Scan Documents** - Prompts user for indexing information, scans, cleans and deskews images and then files them along with database indices.
- ▶ **Automatic Image Quality Improvement** - Deskews & cleans images for best quality before filing.
- ▶ **Indexed Retrieval** - Up to 8 index fields per document type. Cross document-type query and retrieval.
- ▶ **View** (Magnifiers, rotate, inverse image, best fit, etc.)
- ▶ **Print**
- ▶ **Annotations** - Text notes, stamps, highlighters, etc. Saved as part of document image!
- ▶ **Export to PDF** - Single and multiple pages of a document.
- ▶ **Audit Logs** – OdinDoc captures all retrieval activity for viewing and reporting.
- ▶ **Security** – User ID and Password – Access rights required for specific Document Types.

Define Documents - Setup new documents and indexing fields. Use OdinDoc for all your electronic filing needs. OdinDoc creates four system indexing fields and while allowing the user to define up to four more user-defined fields for indexing purposes. Setup new documents for filing in a matter of seconds. Begin scanning and filing new documents immediately!

Scan Documents - OdinDoc offers a low cost alternative for electronic document filing which also incorporates the added benefits of a truly flexible database with the ability to define multiple document types along with the individual indexing and key field requirements for each document type.

Document Types – create an unlimited list of document types covering every department within the organization.

Retrieve Documents – Documents can be filed by Account Number, Account Name and other pertinent data. As an example a Human Resources application can be setup to include indexing fields such as Position, Date-of-Hire and Manager. The following is an illustration on a search based on "Performance Review". Retrieval is quick and easy using OdinDoc's true database architecture.
