

We've Been "Monitoring" and We're "Alerting" IT Administrators

Due to complexity and confusion within IT environments, productivity is lost and budgets are wasted. Managers and administrators need simple and powerful tools to help them regain control to meet business objectives. The problem is that many unique single purpose utilities do not suitably address your needs. In fact, their lack of continuity across multi-vendor hardware and software environments can be a source of continuing frustration. Standalone utility solutions only reduce your productivity, and diminish your efficiencies as systems go down and there isn't a way to meaningfully alert you that a problem exists that needs to be immediately addressed. These circumstances result in dissatisfaction, a reduction in business and ultimately, a bleaker bottom line.

The Need To Support Multi-Vendor, Multi-Operating System and Multi-System Applications

Integrated Financial Systems (IFS) would like to introduce **SyAM ManageAnywhere™**, a System Area Management Technology. ManagerAnywhere™ enables IT managers to contend with relentless change and save time and money by proactively managing system and storage assets, as opposed to reacting to the issues they cause. It provides centralized, real-time monitoring and full remote access to all managed systems (multi-vendor servers, desktops, notebooks, etc. running Windows or Linux) from anywhere across an IP network. Using a single, easy-to-use browser-based user interface, installed and operational in minutes, administrators can take control of their environments, thus preventing costly downtime and data disruption, maximizing system resource utilization and reducing total cost of ownership."

Increase availability, improve accountability, maximize system resource utilization and reduce total cost of ownership.

SyAM's proactive management technology provides the pre-failure analysis to identify and alert on the potential issue before the appliance stops functioning and shuts down. These specific warnings and critical alerts assist administrators in pinpointing the root cause of a problem. In addition to the monitoring and alerting capabilities, the software also supports Asset Discovery and Management, Integrated RAID Management, Remote Services, and Reporting on assets, change history and event analysis.

Asset monitoring, unified alerting, remote management, and reporting across a mixed hardware/software environment all through a single user-interface!!

As the Authorized SyAM Solution Provider in the northeast, we believe that SyAM's ManageAnywhere™ is just the tool for you. Please visit us on our website at www.i-f-s.com and take a look at this unique and powerful tool. Feel free to use the on-line demo, and you are also more than welcome to download a live version of the local software – free of charge!!

If you like what you see and would like to get more detailed information, including pricing, please do not hesitate to contact us at syamsales@i-f-s.com or call us at [203-234-8441](tel:203-234-8441) and ask for SyAMSales.

SyAM ... Systems Area Management Made Simple !!
